PROPERTIES OF ENERGY PLUS ALKALINE WATER

MICRO-CLUSTERING PROPERTY PROCESS

Big Water Clusters in **REGULAR WATER** reduces the absorption capacity of body, whereas Ionized Small Water clusters in **Energy Plus Alkaline Water** makes the absorption process of human body easier.

ANTI-OXIDATION PROPERTY PROCESS

The process of oxidation in the human body produces unstable chemicals called free radicals, which damage cell membranes and other structures. Alkaline ionized water is an anti-oxidizing agent, as it has a negative ORP value and it is able to donate extra electrons to neutralize the harmful effects of free radicals on the body.

▶ HOW DOES ENERGY PLUS ALKALINE WATER IONIZER MACHINE WORK?

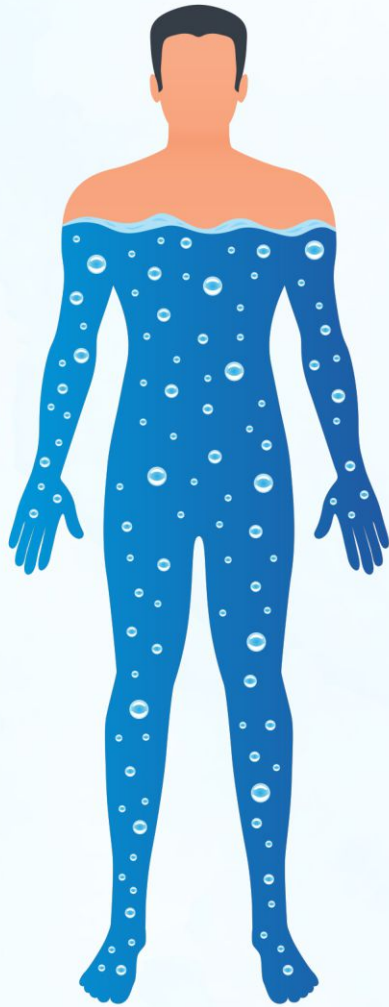

Alkaline water electrolysis is used to split water into the gases hydrogen and oxygen using electric energy. The tap water moves through several electrode plates, separating into acidic and alkaline parts. It is split into OH⁻ (hydroxid ions) and H⁺ (hydrogen ions). All this takes place through natural process

The hydrogen ions react with electrons given by the cathode (- charged electrode), forming H₂, molecular Hydrogen. Hydroxid ions remain, making the water more alkaline around the titanium cathode. Conversely, close to the anode (+ charged electrode), hydroxid ions give electrons to the anode, eventually forming O₂ (Oxygen). Hydrogen ions remain, making the water more acidic around the titanium anode.
